Data Analytics in Insurance

According to **Investopedia**, **data analytics** is “the science of analyzing raw data in order to make conclusions about that information”. In the digital era, every sector needs to leverage the potential of untapped data.

One such industry that holds a wealth of data is the **insurance** business. As a data-driven industry, insurance sector comprises customer information, product details & pricing information, underwriting practices, and much more.

A recent study’s findings indicate that **86% of insurance businesses** are developing insurance data analytics systems for the best possible predictions of big data reports. Using data analytics, the insurance industry can get insights on new markets, rivals, clients, risks, laws, and so on.
