Vijay Computer Academy SUMMER CAMPS

KIDS AND YOUTH COMPUTER COURSES

HTML 5 / CSS 3 - WebDesign

HTML (the Hypertext Markup Language) and CSS (Cascading Style Sheets) are two of the core technologies for building Web pages. HTML provides the structure of the page, CSS the layout, for a variety of devices. Along with graphics and scripting, HTML and CSS are the basis of building Web pages and Web Applications.

Java Programming

Java has been the number 1 most popular language basically since its creation in the mid-90s. With the growing importance of web based and mobile based applications, Java today is the foundation for most networked applications and is useful for scripting, web-based content, enterprise software, games and mobile applications.

Python Programming

Python is a general-purpose and popular programming language. It's great as a first language because it is concise and easy to read, and it is also a good language to have in any programmer's stack as it can be used for everything from web development to software development and scientific applications.

Google Apps

This dynamic program introduces young learners to the power of Google's suite of productivity tools. Participants will explore Gmail, Google Docs, Sheets, and Slides, gaining essential skills for efficient communication, document creation, and collaborative projects. Get ready for a summer of fun and learning in the cloud!
